INTRODUCTION

This Customer Application Note instructs the users on how to install the USB driver for the Apex4 printer with USB port.

DIP-SWITCH POSITION

The dip-switch 7 must be in "ON" position to activate the USB port on the printer.

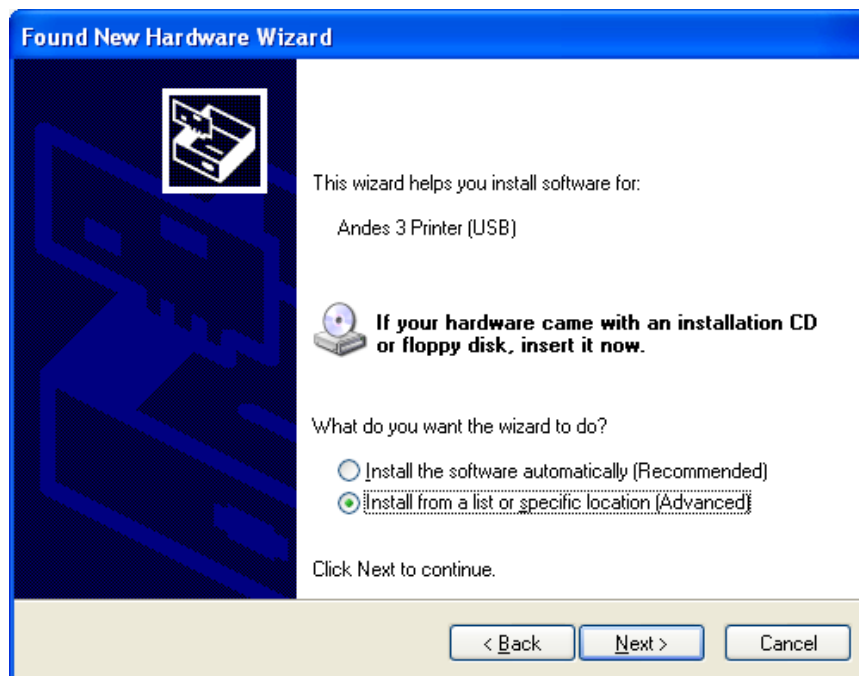

INSTALLING DRIVER

1. Turn "ON" the printer and plug the printer with the computer using a printer USB standard cable
2. The computer will show a screen informing that a new hardware has been found

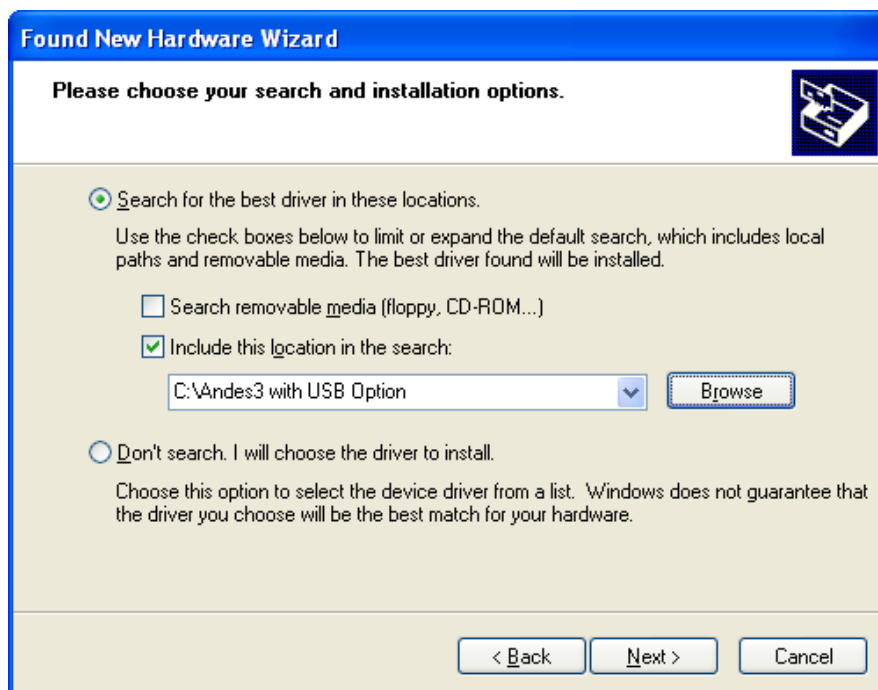

3. Select "**No, not this time**" option to allow you to specify the path where the driver is located and then click the "**Next**" button
4. Select the second option "**Install from a list or specific location (Advanced)**" and then click "**Next**" as indicated in the image below

TESTING THE USB DRIVER

1. To verify what the virtual serial port assigned to the printer DRIVER, open the **Control Panel\System\Device Manager** on your computer and under “**Ports (COM & LPT)**” the list of available port will be shown. In this example, the COM8 has been assigned to the Apex4 printer as shown in the image below

To test the Driver, open **HyperTerminal** using the COM 8 and type any text. The text will be printed in the Apex4 printer.
